Please find below and/or attached an Office communication concerning this application or proceeding.

Commissioner of Patents and Trademarks

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 1 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. Extensions of time may be available under the provisions of 37 CFR 1 135(a) In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. If NO period for reply is specified above is less than thirty (30) days, a reply within the sation of reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). Status 1) Responsive to communication(s) filed on 2a) This action is FINAL. 2b) This action is non-final. 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213. Disposition of Claims 4) Claim(s) 1-48 is/are pending in the application. 4a) Of the above claim(s) is/are withdrawn from consideration. 5) Claim(s) is/are allowed. 6) Claim(s) is/are objected to. 8) Claim(s) is/are objected to. 8) Claim(s) is/are subject to restriction and/or election requirement. DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-12, drawn to formulations of Apo-2 ligand, classified in class 530, subclass 350.
- II. Claims 13-15, drawn to methods of making formulations by adding divalent cations to Apo-2 ligands, classified in class 530, subclass 412.
- III. Claims 16-26, 45, and 46, drawn to methods of making Apo-2 ligands in the presence of divalent cations, classified in class 435, subclasses 69.1, 320.1, and 325, and class 530, subclass 412.
- IV. Claims 27-30, 47, and 48, drawn to methods of making Apo-2 ligands and purifying them in the presence of divalent cations, classified in class 435, subclasses 69.1, 320.1, and 325, and class 530, subclass 412.
- V. Claims 31-35 and 44, drawn to methods of making and purifying Apo-2 ligands and making formulations by adding divalent cations, classified in class 435, subclasses 69.1, 320.1, and 325, and class 530, subclass 412.
- VI. Claims 36-38, drawn to Apo-2 ligand variants, classified in class 530, subclass 350.
- VII. Claims 39-43, drawn to nucleic acids and means of expression, classified in class 435, subclasses 69.1, 320.1, and 325.

The inventions are distinct, each from the other because of the following reasons:

Art Unit: 1646

The formulations of Group I are distinct from the methods of Groups II-V because they can be made by any of the other methods.

- The formulations of Group I are distinct from the variants of Group VI because they are different molecules with different sequences and different structural and functional characteristics.
- The formulations of Group I are not related to the nucleic acids of Group VII. They have different structures, different functions, and can not be used together or interchangeably.
- The methods of Groups II-V are distinct, each from the other, because they have different method steps and thus different considerations; the success of one would not render the success of another obvious.
- The methods of Groups II-V are distinct from the variants of Group VI. The variants can be generated in other ways, such as by synthetic methods.
- The methods of Groups II-V are distinct from the nucleic acids of Group VII because the methods can use other nucleic acids, such as the wild type Apo-2 ligand.
- The variants of Group VI are not related to the nucleic acids of Group VII. They differ structurally and functionally and can not be used together or interchangeably.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Application/Control Number: 09/603,866

Art Unit: 1646

Because these inventions are distinct for the reasons given above and the searches required for the different groups are not coextensive, restriction for examination purposes as indicated is proper.

This application contains claims directed to the following patentably distinct species of the claimed invention:

For Groups I-V, the species are:

- a) zinc
- b) cobalt.

These are different atoms with different structures and properties; successful use of one would not render successful use of the other obvious.

For Groups VI and VII, the species are:

The variants set forth in claims 36-38.

These are different molecules with different structures and different functional properties.

One variant does render any of the others obvious.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Application/Control Number: 09/603,866

Art Unit: 1646

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Janet Andres, Ph.D., whose telephone number is (703) 305-0557. The examiner can normally be reached on Monday through Friday from 8:00 am to 5:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Yvonne Eyler, Ph.D., can be reached at (703) 308-6564. The fax phone number for this group is (703) 305-3014 or (703) 308-4242.

Communications via internet mail regarding this application, other than those under U.S.C. 132 or which otherwise require a signature, may be used by the applicant and should be addressed to [yvonne.eyler@uspto.gov].

All Internet email communications will be made of record in the application file. PTO employees do not engage in Internet communications where there exists a possibility that sensitive information could be identified or exchanged unless the record includes a properly

Art Unit: 1646

signed express waiver of the confidentiality requirements of 35 U.S.C. 122. This is more clearly set forth in the Interim Internet Usage Policy published in the Official Gazette of the Patent and Trademark Office on February 25, 1997 at 1195 OG 89.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 308-0196.

Janet Andres, Ph.D. September 26, 2001
